**Mimi QA Challenge**

1. Imagine the following situation: You need to establish a QA process in a cross-functional team. The team is building an SDK to implement into partner products front-end application using REST APIs.

>   1. Where would you start? What would be your first steps?
>   2. Which process would you establish around testing new functionality? How would you want the features to be tested?
>   3. Which tools would you suggest using to help your team with daily work?
>   4. If you would do test automation which techniques or best practices would you use the application?

2. Please provide one or two well-documented bug reports based on issues found on the following URL: (https://web-hearing-test-staging.mimi.io/web-hearingtest/staging)

3. How would you test the search UI functionality of your favorite Android/iOS app?

>   1. Choose your   Android/iOS app from the Play/App store
>   2. Document several test cases.
>   3. Implement two or three automated tests based on the test cases.

*Please, provide your solution in a git repository of your choice if possible or as a PDF document.
